DoReMi's Web URL link is :

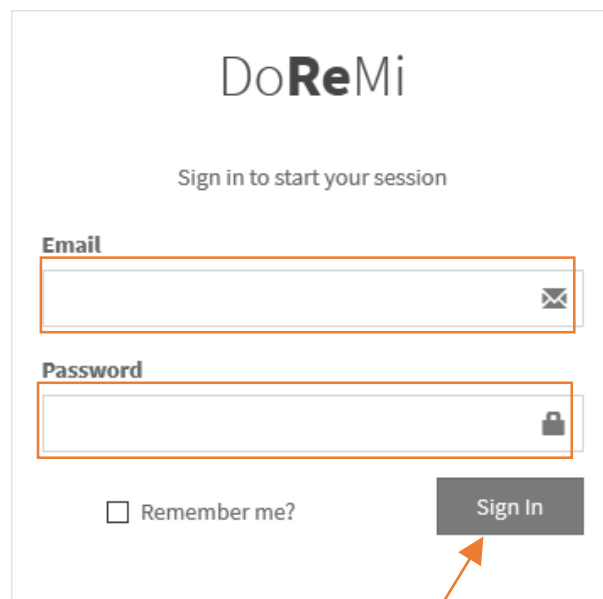

<https://doremiwebapp.azurewebsites.net/>

Click the above hyper link to navigate to DoReMi's online order management system's sign-on web page.

Signing On

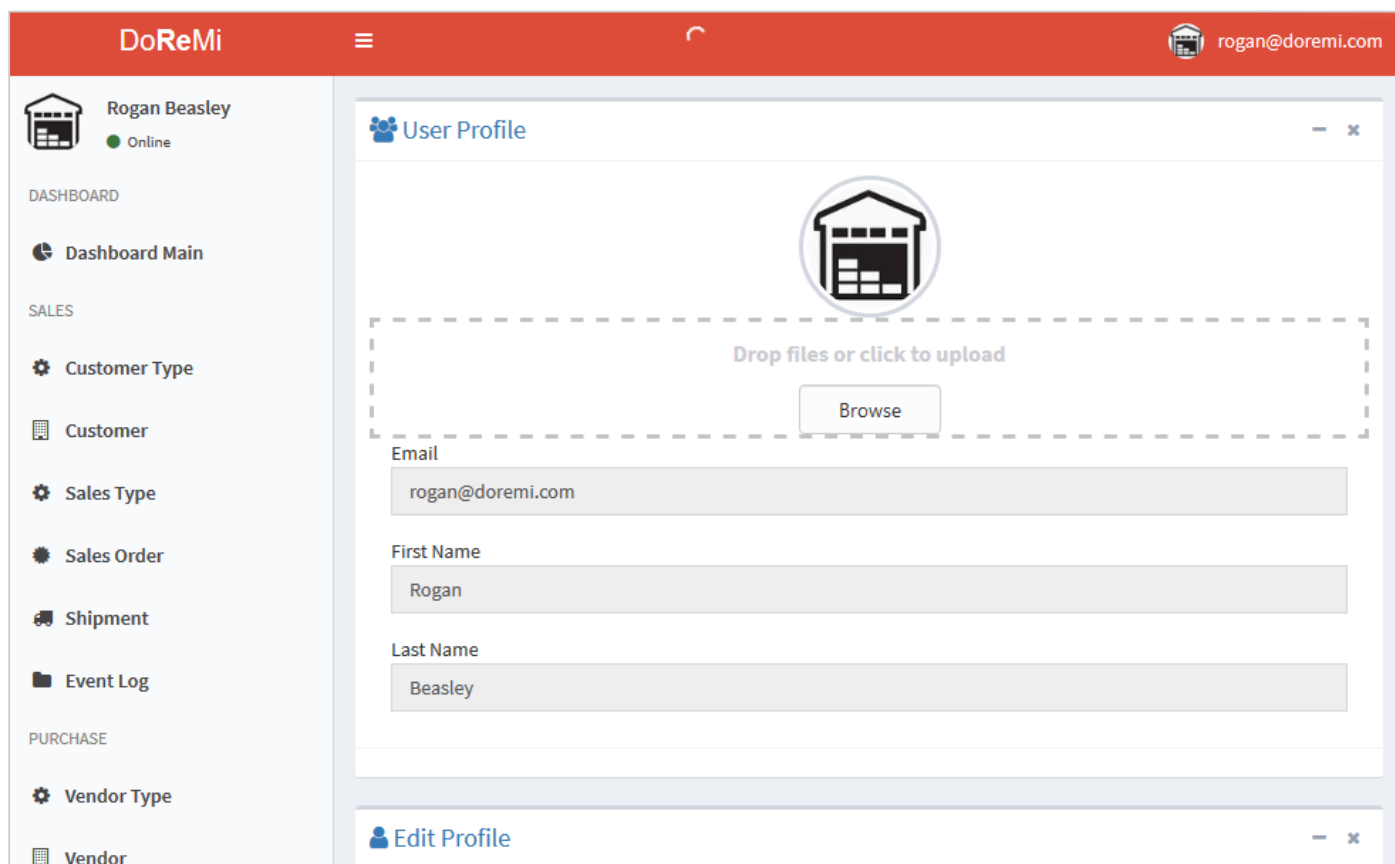

STEPS:

- 1) Enter your email address and click the **Sign In** button to proceed.
- 2) You will see the user profile screen if you are successfully signed on.

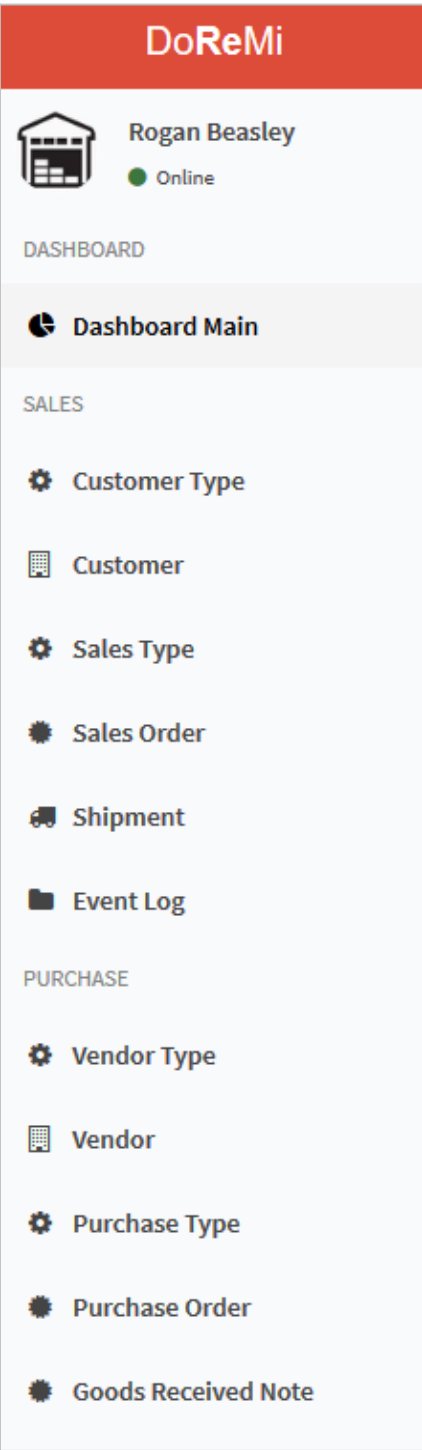

The image shows the DoReMi sign-in interface. At the top, the 'DoReMi' logo is displayed. Below it, the text 'Sign in to start your session' is centered. There are two input fields: 'Email' and 'Password'. The 'Email' field has an envelope icon on the right, and the 'Password' field has a lock icon. Below the 'Email' field is a checkbox labeled 'Remember me?'. To the right of the 'Remember me?' checkbox is a dark grey button labeled 'Sign In'. An orange arrow points from the text 'Sign In Button' below the form to the 'Sign In' button.

Sign In Button

The image shows the DoReMi user profile screen. The top header is red and contains the 'DoReMi' logo, a menu icon, a refresh icon, and the user's name 'Rogan Beasley' with the email 'rogan@doremi.com'. The left sidebar is light blue and contains a list of menu items: 'Dashboard Main', 'Customer Type', 'Customer', 'Sales Type', 'Sales Order', 'Shipment', 'Event Log', 'Vendor Type', and 'Vendor'. The main content area is white and contains a 'User Profile' section. At the top of this section is a circular profile picture placeholder with a building icon. Below it is a dashed box with the text 'Drop files or click to upload' and a 'Browse' button. Below the dashed box are three input fields: 'Email' (containing 'rogan@doremi.com'), 'First Name' (containing 'Rogan'), and 'Last Name' (containing 'Beasley'). At the bottom of the main content area is an 'Edit Profile' button.

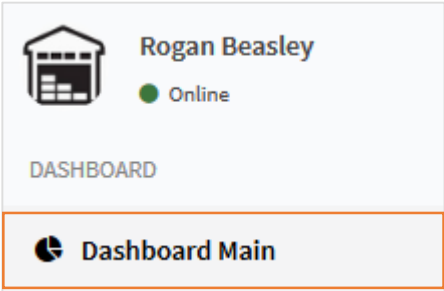

All users would have similar limited look and feel of the web user interface. However, each user will have access only to the features or functionality of the system based on what role there are assigned to.

On the left is a typical menu bar accessible to every user of the system.

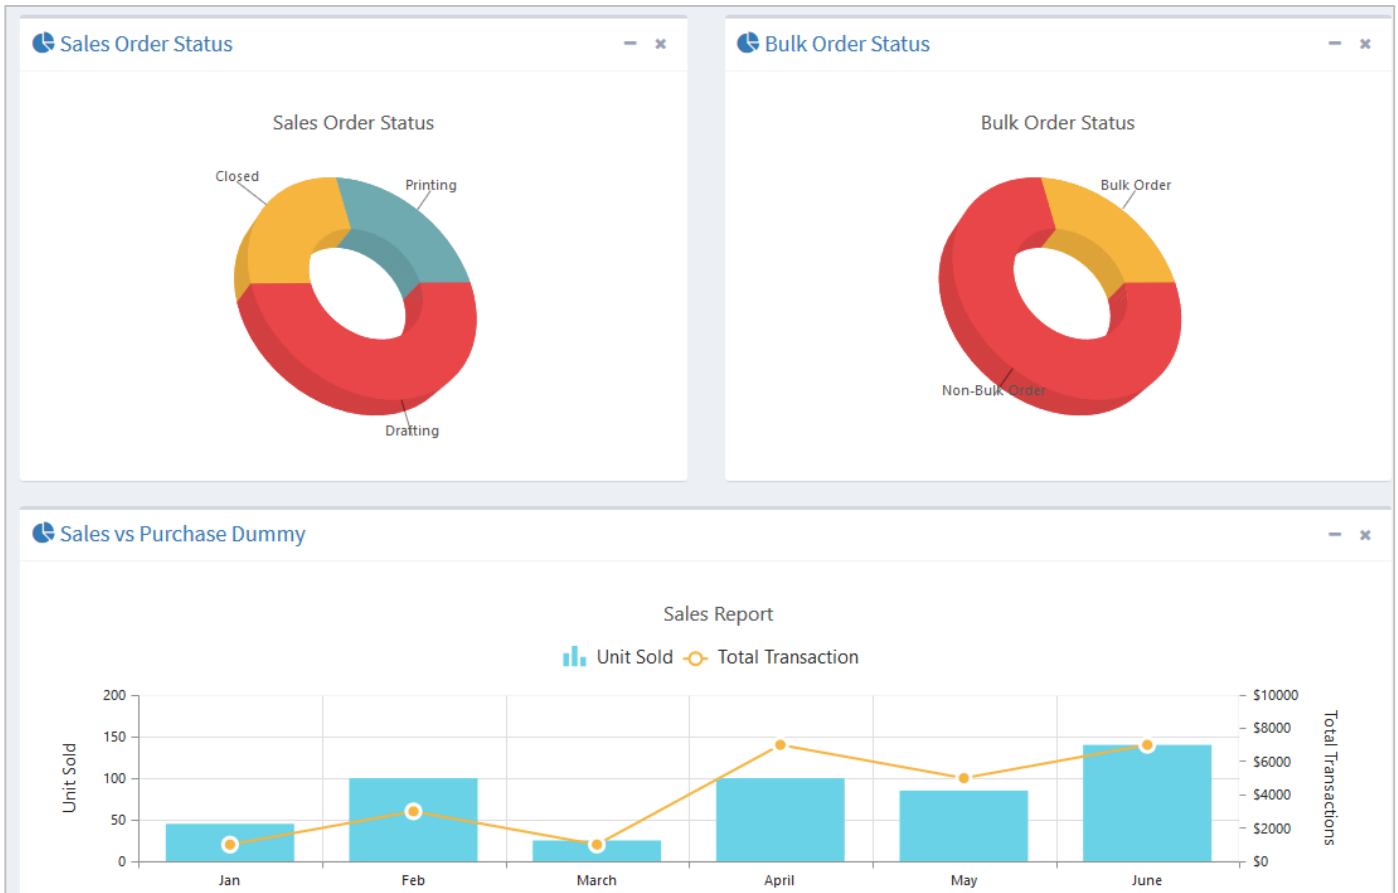

DASHBOARD

The Dashboard on DoReMi’s web system contains a summary graphical views of some common data information that is useful to sales, operations and finance teams.

To access the Dashboard, click the **Dashboard Main** link.

Dashboard Main Sample

There are basically three key charts made available on DoReMi's Dashboard.

- 1) **Sales Order Status**
This provides a graphical indication of the number of orders in various statuses.
- 2) **Bulk Order Status**
This is a graphical indication of bulk order versus non-bulk orders.
- 3) **Sales versus Purchase (Dummy)**
- This is not yet implemented. Will be included in phase 2.

A user would not be able to view any functionality or feature that is not assigned to him or her. A message will be shown on the page indicating this. **See Below.**

Click the Back button to get back to the normal menu view.

To Sign out from the System, Click the User Profile Icon and select **Sign Out** link.

CUSTOMER MASTER

The customer master contains the main customer account information data.

Only user that are assigned to maintain the customer master may add or update this records.

EDIT AN EXISTING CUSTOMER RECORD

To edit an existing customer record, select a record from the list of records on the customer master screen.

Click the pencil icon. A dialog pops up With the data fields that you may amend.

Make the changes required and click the Save **button** to save the changes.

Edit Button

The unique identifier for each customer record is the customer’s email address.

However, the system does have an internal customer number that is use for internal tracking purposes only.

ADD A NEW SALES ORDER

A customer service representative or a sales person would be able to create a new sales order on DoReMi's online order management system.

To do this, select the Sales Order from the left menu bar and click on the “+” icon to start a new sales order.

Enter the require data into the fields provide as shown on the po-up dialog box (Right).

If the sales order is a bulk order, make sure you checked the “Is Bulk Order?” checkbox.

Make sure you select the customer, this sales order is to be assigned to. The first status for a new sales order is always “Drafting”. The sales order number will be automatically assigned by the system.

To add a new product to a new sales order, click the “+” icon and enter the necessary data into the fields provided on the inline entry fields. Click the **Save** Icon to update the record. The selling price and total amount will be computed once the record is saved.

EVENT LOGS

The system provides a quick and useful mean of checking all activities that were performed by different users for traceability and for audit purposes. A user may easily check his activity logs using the “Event Log” feature.

You may see a list of activities by selecting the Event Log item from the left menu bar.

SALES USER – CONFIRMS A SALES ORDER

A user in Sales department may confirm a new sales order by executing the following steps:

- 1) Select the Sales Order item on the left menu bar.
- 2) Click the **Edit** icon on the top menu of the sales order listing.
- 3) Choose “**Confirmed**” from the Order Progress Type drop down menu.
- 4) Click the **Save** button to update the changes.

At this stage, the system's Rules Engine would be fired and checks if the stock's inventory has sufficient balance quantity to fulfil the quantity ordered for each product line item in the sales order. It will also check if discounts need to be applied to the sales order and finally, check if the system can automatically approve the confirmed sales order based on the pre-set auto-approval limits of each customer.

If the order is **auto-approved**, an email notification would be sent to the packing team to start their process of packing the picked products from warehouse.

If the order is **NOT auto-approved**, an email notification would be sent to the Accounts department to follow up on credit risk checks on the sales order's customer.

If the customer's credit risk is cleared, the order gets approved and the process continues to the packing team in warehouse.

PACKING TEAM USER – “Packing” status

For any approved sales orders, the packing team is automatically informed via email.
A packing team user will need to access that sales order via the system and update it to the next status of **“Packing”**

Do note that when the rules engine execute the rules logic, it will execute some interim changes in the status updates before reaching the approved status.
That interim status is **“Balance Verified”**.

This MUST NOT be selected for updating a sales order’s status.

See flow chart diagram:
[Sales Order Transaction Process Flow Chart v2.0.pdf](#)
at git hub:

https://tinyurl.com/y667ucum/Sales_Order_Transaction_Process_Flow_Chart_v2.0.pdf

Once packing of products is completed by the packing team, the products /goods are ready for shipping. The packing team user updates the sales order status to **“Shipping”**.

Assuming that the shipment gets delivered to the customer. The logistic provider would proceed to update their tracking system and they would have an interface to our WEB API which then updates DoReMi’s system’s sales order status to **“Closed”**.

This completes a typical sales order cycle in DoReMi’s business work flow.

A TYPICAL EVENT LOG FOR A STANDARD SALES ORDER

In this user guide example which we use sales order number “00008”, you can see the sales order was check with “**BalanceCheckRule**” rule. It was then processed by the “**BestDiscountRule**” rule and the ordered quantity is verified by the “**AutoApprovedRule**” rule.

Subsequently, the order is automatically approved based on the “**SalesOrderAutoApproveRule**” Rule.

WHEN A SALES ORDER QUANTITY EXCEEDS THE INVENTORY STOCK’S BALANCE

In this simple example, we are looking at the sales order number “00005”. You can clearly see that the ordered quantity is 10,000 pcs. However, there is clearly insufficient quantity in the warehouse to fulfil this order.

As such, when the order was confirmed, the “BalanceCheckRule” rule executed its logic and cancelled the order and sent out an email to notify the sales and customer service teams. In this example, it is most likely a typing error that was entered into the quantity field.

This is just an example to high light how the rules are working in the system. Without the rules engine, the error could have potentially created unnecessary jobs for the packing team which means lost or revenue for DoReMi.
